Experience

LUIS+	Moscow, Russia	MedIQ	2026–Ongoing	CHFTM	2023–2025
Software Engineer	2024–2025	Software Engineer		Team Lead, Developer	
Worked at a major B2B supplier of security solutions. Fixed issues in the internal tool for complex data ingestion and scraping from hundreds of incompatible sources.		Working in a medtech startup helping doctors diagnose and treat patients better based on research data. Developing advanced LLM pipelines for use in medical institutions.		Assembled and led a programming team participating in various hackathons and olympiads.	
Stack: TypeScript, Nest.js, MySQL, Vue, NATS		Stack: Python, Langchain, React, PostgreSQL		Stack: Python, Flutter, Go	
Skills: Microservices, Enterprise development, Data ingestion		Skills: LLM pipelines, MedTech		Skills: Team management, Rapid development, Product design

Projects

med?	RWC Reborn	ream
Medicine in Russia is basically unregulated, so I wrote this tool to let people check the evidence of drugs they take. It aggregate data from trusted sources (ie. FDA, PubMed, WHO), shows the evidence level and summarizes the research using a language model.	Completely re-wrote and refactored an abandoned extension for the GNOME desktop environment for Linux that adds rounded corners to all windows using a custom Fragment shader. The project currently has nearly 200.000 downloads.	A standalone re-implementation of Telegram's chat export functionality, allowing automaton of bulk backups of chats. This project required understanding of Telegram's messy C++ codebase, as well as the bespoke MTProto protocol it uses to transfer data.

Awards

Silver medalist	March 2024	Winner	2022, 2024	1st place	August 2023
National Technological Olympiad for Cybersecurity		National Data Analysis Olympiad		DriveIT Hack	
Silver medal in one of the largest nationwide cybersecurity CTF competiton.		Won a medal twice in a competitive data science competition, with an individual knowledge test stage and a week-long team project stage analyzing a real dataset.		Won a team hackathon organized by Moscow's public transport department, developing a prototype of a subway navigation app for smart watches.
